Dear Valued Customer, Resident, Owner, or Consumer,

We are focused on delivering clean drinking water and protecting the health of every household in our community. This notice contains important information about your drinking water service connection. Please share this information with anyone who consumes food or drinks prepared using water at this property.

We have determined that the pipe (also referred to as a service line) delivering water from the water main to this property is classified as lead and is required to be replaced over the next several years. You will be receiving more information about replacement plans and scheduling, but in the interim, we are required by law to inform you of the material of your service line. The figure below provides a visual representation of the service line. Please note, this is not a true representation of your service line, but an example of a common scenario.

Health effects of lead

People living in homes with a lead service line may have an increased risk of exposure to lead from their drinking water. Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or worsen existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have an increased risk of these negative health effects. Adults can have increased risk of heart disease, high blood pressure, and kidney, or nervous system problems.

Steps you can take to reduce the risk of lead in drinking water

Below are recommended actions you may take, separately or in combination, if you are concerned about lead exposure from your drinking water. This list also includes where you may find more information and is not intended to be a complete list or to imply that all actions equally reduce lead in drinking water.

Use a water filter certified to remove lead. Using a filter can reduce lead in drinking water. If you use a filter, it should be certified to remove lead. Read instructions provided with the filter thoroughly to ensure correct installation, maintenance and replacement timeframe. Using a cartridge after it has expired can reduce its effectiveness.

Clean your faucet aerator. Regularly remove and clean your faucet's screen, also known as an aerator. Sediment, debris and lead particles can collect in your aerator. Regular cleaning ensures these particles are cleaned and removed.

Use cold water. Do not use hot water from the tap for drinking, cooking or making baby formula as lead dissolves more easily into hot water. Boiling water does not remove lead from water.

Run your water. The more time water has been sitting in the pipes providing water to your home, the more likely it is to contain lead. Before drinking, flush your home's pipes by running the tap, taking a shower or doing laundry. The amount of time to run the water will depend on your service line material, as well as the length and diameter of the service line and the amount of plumbing in your home.

Get your child tested to determine lead levels in their blood

A family doctor or pediatrician can perform a blood test to determine lead levels. They will also be able to provide more information about the health effects of lead. State, city or county health departments can also provide information about how you can have your child's blood tested for lead. The Center for Disease Control and Prevention (CDC) recommends public health actions when the level of lead in a child's blood is 3.5 micrograms per deciliter or more. For more information, and links to the CDC's website, please visit <https://www.epa.gov/ground-water-and-drinking-water/basic-information-about-lead-drinking-water>

Replacing lead service lines

As your Public Water System, if you notify us that you are replacing your portion of a lead service line, we are required to replace our owned portion of that lead service line. If you are planning on replacing the portion of the line you own, please notify us at 330-335-2830.

As your Public Water System, we are required to provide you with information on programs that provide financial solutions to assist with the replacement of your portion of the lead service line as well as information on opportunities for replacing your lead line. Currently, we do not have any programs. Once available, you will be notified.

For questions regarding your service, please contact Derrick Shriver with our Water Distribution Department at 330-335-2830.
